Professional Summary

MCA candidate with expertise in Machine Learning, Deep Learning, Artificial Intelligence, Python, FastAPI, SQL, NLP, and Data Analytics. Developed AI-powered applications including donor-matching systems, sentiment analysis platforms, and intelligent decision-support solutions. Passionate about building scalable AI systems that transform data into actionable insights.

Technical Skills

Programming Languages: Python, Java, SQL, COBOL, C

Machine Learning & AI: Machine Learning, Deep Learning, Data Preprocessing, Feature Engineering, Model Evaluation, Predictive Analytics, NLP, Prompt Engineering

Frameworks & Libraries: FastAPI, Flask, Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch

Databases: MySQL, PostgreSQL, MSSQL, DB2

Web Technologies: HTML, CSS, JavaScript, React, Next.js

Tools: Git, GitHub, Docker, Prisma ORM, Jupyter Notebook

Core Computer Science: Data Structures, Algorithms, Object-Oriented Programming, REST APIs, Database Design

Education

Master of Computer Applications (MCA)

2024 – 2026

Alliance University, Bangalore

CGPA: 9.2/10

Relevant Coursework: Machine Learning, Artificial Intelligence, Data Structures, DBMS, Software Engineering

Bachelor of Science in Mathematics

2021 – 2024

Amrita Vishwa Vidyapeetham, Coimbatore

CGPA: 6.35/10

Projects

LifeRush Blood Donation Platform — FastAPI, PostgreSQL, Machine Learning

- Developed an AI-powered donor-matching platform using FastAPI, JWT authentication, and PostgreSQL to streamline emergency blood donor discovery.
- Engineered a donor-ranking algorithm leveraging blood-group compatibility, health metrics, and geographic proximity to improve donor matching efficiency.
- Built REST APIs and real-time request workflows supporting rapid donor identification and emergency blood request management.

Twitter Sentiment Analysis System — Python, Flask, Pandas, NumPy

- Developed a machine learning-based sentiment analysis platform to classify social media content and generate actionable sentiment insights.
- Performed data preprocessing, feature engineering, and model evaluation to improve prediction quality and classification performance.
- Designed analytical dashboards visualizing sentiment trends and engagement patterns for data-driven decision making.

DriveLegal AI Traffic Assistant — Next.js, PostgreSQL, TypeScript

- Developed an intelligent legal assistance platform automating traffic violation guidance and challan estimation workflows.
- Designed scalable backend architecture integrating PostgreSQL and Prisma ORM for secure legal information retrieval.
- Implemented authentication mechanisms, API security controls, and Docker-based deployment pipelines following modern security practices.

Cloud Gaming Simulation System — Python, Data Structures

- Developed a cloud gaming simulation platform to model resource allocation and gaming workload distribution.
- Applied advanced data structures and scheduling techniques to optimize resource utilization and system performance.
- Evaluated system efficiency through simulation-based performance analysis and workload management strategies.

Experience

Mainframe Developer Intern

Dec 2025 – Present

Teamware Solutions

- Developed a COBOL-based Integrated Paddy Farm Payroll and Profit Optimization System automating wage computation, production cost analysis, and revenue tracking.
- Designed payroll processing and financial reporting modules improving labor cost visibility and profitability assessment.
- Implemented market-price comparison workflows enabling data-driven selling decisions and profit optimization.

Achievements

- Solved 150+ coding problems across LeetCode, strengthening algorithmic thinking and problem-solving capabilities.
- Finalist and contributor in HackCulture Hackathon, developing an AI-powered emergency blood donation platform.
- Represented university in intercollegiate badminton competitions, demonstrating teamwork, discipline, and leadership.
